Standby Remote Control Remote Socket Switch

EcoSavers® Standby Remote Control

Remote control sockets

ECOSAVERS®

The Standby Remote Control from EcoSavers® combines energy saving with the luxury of switching your electrical devices on or off by remote control.

With this product you can turn off your electrical devices simply by using the remote control, cutting off the electric power. Using the Ecosavers' system your device will not be left in standby mode and will therefore save standby power consumption of all the devices connected to the remote socket.

The base-set comes with a remote control and either one or three remote sockets, depending on the pack purchased. You can add additional remote sockets (available separately) for operating with one single remote control. Several sockets can be controlled by the same on/off (zone) switch of the remote control, offering many combinations of use.

Easy to set up, each remote socket can be programmed (self learning) to react to either button (zone) 1,2,3 or 4. Enjoy the luxury of remote controlled switching on/off and save energy!

The remote control operates on radio frequency, so the sockets can be placed out of sight if required.

SPECIFICATIONS

Voltage	230V / 50 Hz
Rating	230V / 3.100W max.
Learning code	more than 1 million
Remote Frequency	433.92 MHz
Remote range	20 Metres
Code setting	Learning
ON/OFF indication	LED
Battery Type	L1028 * 1-12V DC Alkaline
